C2 | COMPONENTS + ALL 32 DATABASE TABLES

EXTENDED C2: API and real database relations (not a pure C4 Component diagram)

API :8080 | gRPC :8081 HTTP/2 | Redis :6379 | SQL :1433

DATABASES: I = Identity (21) | T = Tracking (7) | W = Worker (4)

WEB / NGINX :80
Host :5173

/api :8080

API ROUTING
JWT / Role
HTTP :8080

HTTP → MEAL ADVICE
RecommendationsController → Call → RecommendationService + gRPC client → Data → RecommendationRepository / gRPC adapter → Ref → DATA REFERENCE A01
UserFoodPreferences [I]
SQL :1433

HTTP → PROFILE
ProfileController → Call → ProfileService → Data → UserRepository / Profile persistence → Ref → DATA REFERENCE A02
UserProfiles [I]
SQL :1433

HTTP → MEAL PLAN
MealPlansController → Call → MealPlanningService → Data → MealPlanRepository → Ref → DATA REFERENCE A03
MealPlans [I]
SQL :1433

HTTP → AUTH
AuthController → Call → AuthenticationService → Data → UserRepository + RefreshTokenRepository → Ref → DATA REFERENCE A04
Users [I]
SQL :1433

C2: HTTP → Controller → Service → Repository → REF A01–A10. Find the same code on its real table.
FK: 9 solid Crow Foot | APP: 16 dashed | EVENT: 6 dotted. Worker DB is separate; gRPC has no own DB.

32 CURRENT EF TABLES: Identity 21 + Tracking 7 + Worker 4. TABLE REF labels navigate to real tables, NOT SQL foreign keys.
Only solid Crow Foot links are enforced in SQL; all other links are documented APP/EVENT relations.
