C2 - REST API COMPONENTS

One ASP.NET Core API: routing -> controller -> services -> persistence / gRPC / Redis

A. RecommendationController -> TrackingService (own summary) -> gRPC Client -> Recommendation Service -> JSON response.

B. ReminderService -> Identity DB (preferences + outbox) -> Bridge -> Redis -> Worker -> Redis -> Bridge -> notification inbox.

Solid = synchronous calls / EF Core; dashed = Redis events. The Worker is external to C2 and shown in C1.
