LongevityDiet — END-TO-END RUNTIME FLOWS

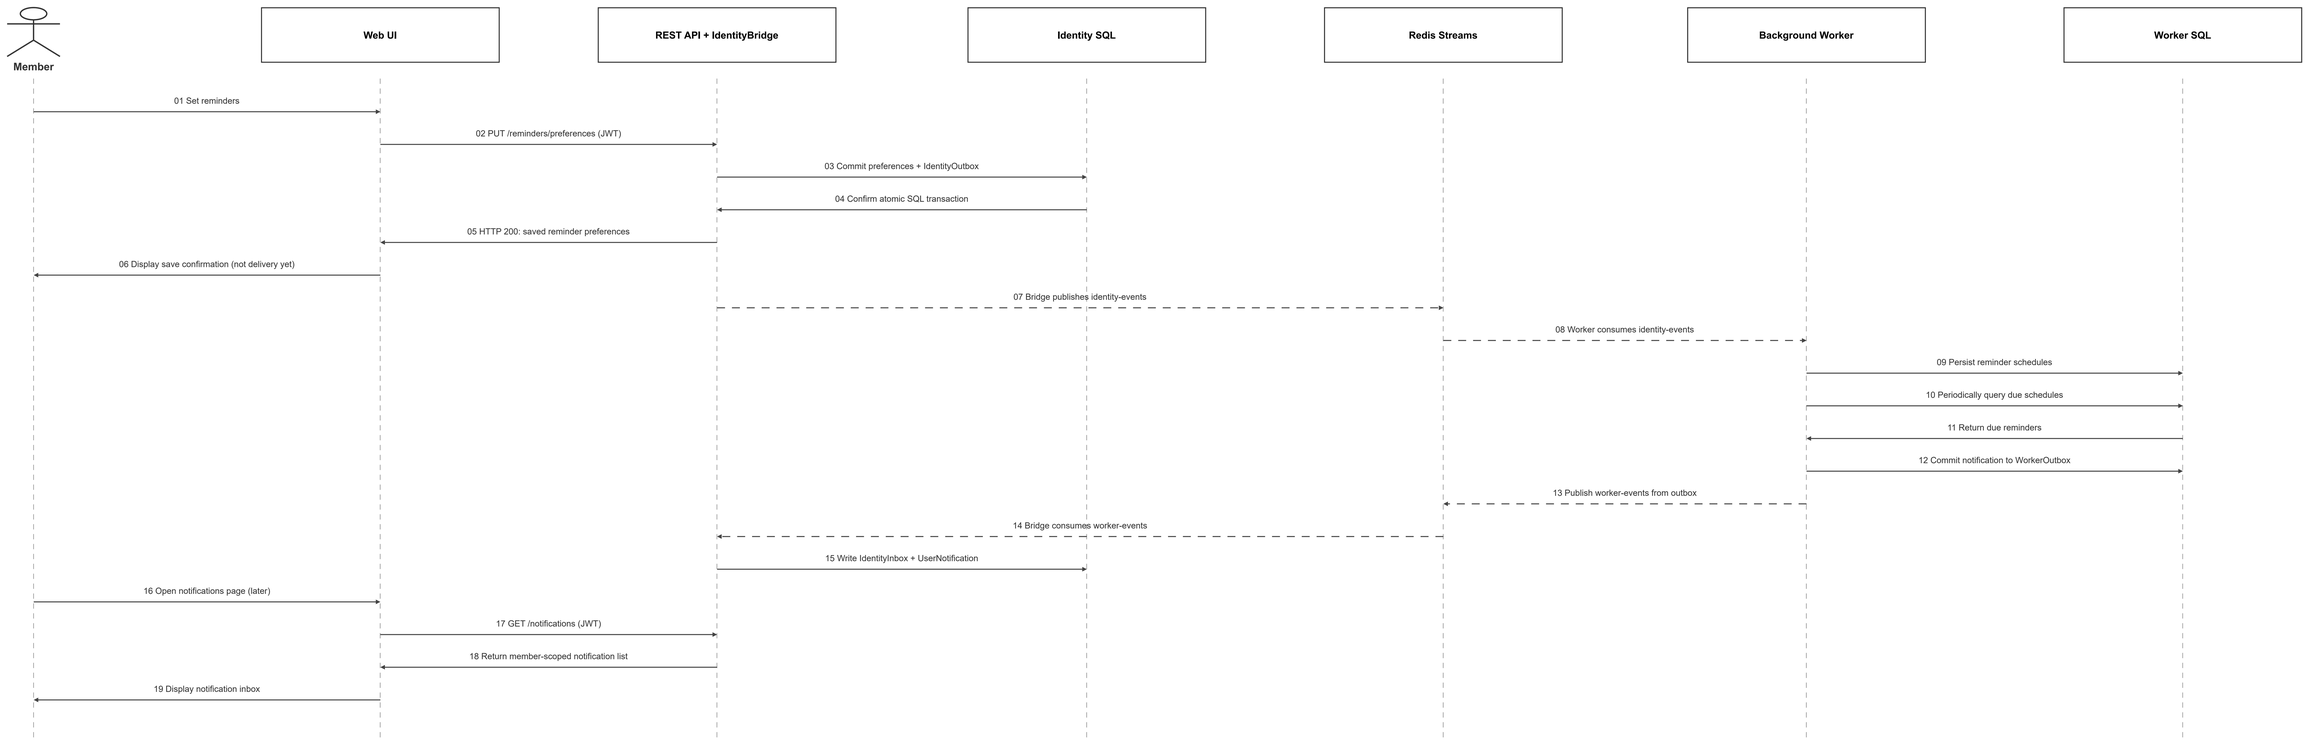

C4 explains structure. This separate sequence sheet shows the complete request, return and event paths.

A. Synchronous activity recommendation — JWT / Tracking / gRPC

Outcome: The same authenticated member receives the result. gRPC failure is visible, never replaced with invented advice.

B. Asynchronous reminders — IdentityOutbox / Redis / Worker / IdentityInbox

Solid arrow: HTTP/SQL/gRPC request or return. Dashed arrow: Redis Streams event. Web fetches notifications; no WebSocket push.

Evidence: real gRPC HTTP/2 integration tests, Redis smoke tests with SQLite. Full Docker Compose + SQL Server E2E not yet verified.
